Market and Credit Risks	
<ul style="list-style-type: none"> • Market risks in global markets. Your investments may go up or down due to changing economic, political or market conditions that impact the price of the fixed income securities and financial derivative instruments that the Fund invests in. • Interest risk and credit risk. The performance of the Fund depends primarily on interest rate risk and credit risk. Interest rate risk is the risk that the value of a portfolio will fluctuate in response to changes in interest rates. Credit risk is the risk that an issuer will be unable to make principal and interest payments when due. 	

<ul style="list-style-type: none">• Market risks in Developing Markets. Developing markets expose the Fund to higher volatility and greater risk of loss than developed markets; they are susceptible to adverse political and economic events, and may be well regulated with less robust custody and settlement procedures.• Currency risks. Assets of the Fund may be denominated in a currency other than the Base Currency of the Fund. Changes in the exchange rate between the Base Currency and the currency of the asset may cause the value of your investment and any income from it to rise or fall.								
Liquidity Risks								
<ul style="list-style-type: none">• The Fund is not listed and you can redeem only on Business Days. There is no secondary market for the Fund. All redemption requests should be made to the authorised agents or distributors.• Flexibility in redemption may be restricted. The Fund may suspend the determination of the NAV of the Shares of the Fund and the sale or repurchase of such Shares in certain circumstances.• Liquidity risk. Securities within the Fund could become hard to value or to sell at a desired time and price, especially in extreme market conditions when asset prices may be falling, increasing the risk of investment loss.								
Product-Specific Risks								
<ul style="list-style-type: none">• Risks of High Yield Bonds. The Fund invests in high yield (non-investment grade) bonds and while these generally offer higher rates of interest than investment grade bonds, they are more speculative and more sensitive to adverse changes in market conditions.• Risks of derivatives and leverage. The Fund intends to use or invest in financial derivative instruments other than for the purposes of hedging and/or efficient portfolio management, including for investment purposes. However, this introduces other risks, in particular, that a derivative counterparty may not meet its contractual obligations.• Capital erosion risk. Some distributing share class may distribute realised and unrealised capital gains and original capital invested. Fees, charges and expenses are also deducted from capital. Both factors may result in capital erosion and reduced potential for capital growth. Investors should also note that distributions of this nature may be treated (and taxable) as income depending on local tax legislation.
