

## TRITON FUND

A: JGMAX C: JGMCX I: JSMGX N: JGMNX R: JGMRX S: JGMIX T: JATTX

### At a glance

#### Performance

The Fund returned 6.28% and the Russell 2500™ Growth Index returned 8.51%.

#### Contributors/detractors

Stock selection in the information technology sector detracted from relative performance. Stock selection in healthcare contributed.

#### Outlook

We believe our portfolio is positioned for long-term performance, supported by our focus on well-managed, profitable growth companies with strong balance sheets.

### Portfolio management

Jonathan Coleman, CFA

Scott Stutzman, CFA

Aaron Schaechterle

### Investment environment

- Stocks rallied in the first quarter as a healthy job market and resilient consumer spending supported economic growth. Inflation showed signs of moderating, leading to hopes that the Federal Reserve (Fed) may reduce interest rates in the months to come.
- Robust corporate results, particularly for some high-profile large-cap information technology companies, reignited investor interest in artificial intelligence (AI). This led to more speculative risk-taking, including in the small-cap growth market.

### Portfolio review

The portfolio's relative underperformance almost entirely reflected a lack of exposure to two high-flying information technology stocks that were disproportionately large contributors to benchmark returns. These included Super Micro Computer, a computer server manufacturer that was viewed as a potential beneficiary of AI-related spending. While we recognize that Super Micro is a beneficiary of the current AI macro tailwinds, we believe that the verdict is still out on the durability of any competitive advantage, as evidenced by its margin structure. Software company MicroStrategy, another top index performer, caught investors' attention due to its large balance sheet holdings of cryptocurrency. Both stocks more than doubled in the quarter — performance that we believe was fueled more by

speculative risk-taking than underlying company fundamentals. While this more speculative trend in the market was a headwind for our relative results, we do not feel comfortable chasing performance by investing in companies we see as inherently risky, or where we have real concerns about the quality of the business model, balance sheet, or management team.

Among the stocks we did own, Blackbaud was a relative detractor. Blackbaud provides Software as a Service (SaaS) solutions that help nonprofits engage with donors. While the company reported solid fourth-quarter results, the stock declined on negative perceptions around Blackbaud's earnings guidance for 2024. In our view, the company did a poor job of explaining this guidance, which partly reflected one-time charges rather than fundamental issues for the business. We have continued to see long-term potential for Blackbaud and held onto the position.

ON Semiconductor, another detractor, supplies analog and power semiconductors to a variety of end markets. Its products include silicon carbide chips that are gaining more adoption as a way to improve the performance of electric vehicle (EV) batteries. Orders growth for silicon carbide chips has softened recently, however, due to slowing EV sales. This led ON Semiconductor to reduce guidance. We see this as short-term headwind, and we believe ON Semiconductor is well positioned as one of a few trusted suppliers of silicon carbide chips.

Relative performance was lifted by our investment in Catalent, a provider of contract drug development and manufacturing services. We have been long-time investors in Catalent due to its diversified earnings streams and unique capabilities, which continued to win our confidence despite some recent operational challenges. Our confidence paid off in the first quarter when Novo Holdings announced it was acquiring Catalent for a premium. The stock rose on the news.

Saia was another contributor. This less-than-truckload (LTL) trucking company has benefited from strong demand and pricing trends. Saia has also gained market share following the bankruptcy of Yellow, a former competitor and disruptor in the LTL space. Saia has been able to acquire a number of Yellow's freight terminals, which has enabled it to expand its network and more effectively compete with regional and national carriers.

### Manager outlook

Recent economic reports have given investors greater confidence in prospects for a soft landing. Job growth has remained strong, and we have heard anecdotal reports that companies are starting to loosen capital spending budgets. Moderating inflation has also raised hopes for Fed rate cuts. However, as inflation remains above Fed targets, we expect rates to remain higher for longer than people had expected at the end of 2023. We see other reasons for caution, including geopolitical uncertainty and slower growth in

international markets such as China. We are also monitoring signs of financial distress for some consumers, which could impact spending going forward.

Additionally, we have been concerned about a recent return to more speculative behavior, with investors willing to pay elevated prices for opportunities tied to trends such as AI or cryptocurrency. This speculation has pushed stock valuations higher even in cases where companies have not substantially raised their revenue or earnings outlooks. Instead, these valuation increases have been driven by multiple expansions, a dynamic we find worrisome and unsustainable. The extreme outperformance of the most expensive index stocks reminds us of what we saw in 2020. However, in contrast to 2020, investors and businesses are now facing a much higher cost of capital that makes such valuations even harder to justify. Given the risks in the current environment, we remain committed to our disciplined investment process. We continue to search out opportunities to capitalize on innovation, as well as unique or improving business models, even as we seek to manage downside risk. We remain focused on well-managed, profitable growth companies with strong balance sheets, healthy free cash flows, and high returns on capital. This balanced, selective approach has worked for us long term, and we believe it is the best way to deliver long-term performance to our investors.

## Triton Fund (as of 03/31/24)

### Performance - USD (%)

Returns	Cumulative			Annualized			
	1Q24	YTD	1 Yr	3 Yr	5 Yr	10 Yr	Since Inception (02/25/05)

INVESTORS

**Definitions**

Free cash flow (FCF) yield is a financial ratio that measures how much cash flow a company has in case of its liquidation or other obligations by comparing the free cash flow per share with the market price per share and indicates the level of cash flow the company will earn against its share market value.

Return on invested capital (ROIC) is a measure of how effectively a company used the money invested in its operations.

**Please consider the charges, risks, expenses and investment objectives carefully before investing. For a prospectus or, if available, a summary prospectus containing this and other information, please call Janus Henderson at 800.668.0434 or download the file from [janushenderson.com/info](http://janushenderson.com/info). Read it carefully before you invest or send money.**

Performance for Class A and I Shares that includes periods prior to 7/6/09 reflects the performance of one or more share classes of the Fund or a predecessor fund, adjusted, where applicable and permitted, for differing fees and expenses. See the Fund's prospectus for further details.

Performance for Class N Shares that includes periods prior to 5/31/12 reflects the performance of one or more share classes of the Fund or a predecessor fund. See the Fund's prospectus for further details.

Returns include reinvestment of dividends and capital gains.

Discussion is based on the performance of Class I Shares.

The opinions are as of 03/31/24, are subject to change and may not reflect the views of others in the organization. Janus Henderson may have a business relationship with certain entities discussed. The comments should not be construed as a recommendation of individual holdings or market sectors, but as an illustration of broader themes.

Holdings are subject to change without notice.

For equity portfolios, relative contribution compares the performance of a security in the portfolio to the benchmark's total return, factoring in the difference in weight of that security in the benchmark. Returns are calculated using daily returns and previous day ending weights rolled up by ticker, gross of advisory fees, may exclude certain derivatives and does not represent actual performance.

**There is no assurance the stated objective(s) will be met.**

**Investing involves risk, including the possible loss of principal and fluctuation of value.**

**Smaller capitalization securities** may be less stable and more susceptible to adverse developments, and may be more volatile and less liquid than larger capitalization securities.

**Growth stocks** are subject to increased risk of loss and price volatility and may not realize their perceived growth potential.

**Initial Public Offerings (IPOs)** are highly speculative investments and may be subject to lower liquidity and greater volatility. Special risks associated with IPOs include limited operating history, unseasoned trading, high turnover and non-repeatable performance.

**Actively managed investment portfolios** are subject to the risk that the investment strategies and research process employed may fail to produce the intended results. Accordingly, a portfolio may underperform its benchmark index or other investment products with similar investment objectives.

**Russell 2500™ Growth Index** reflects the performance of U.S. small to mid-cap equities with higher price-to-book ratios and higher forecasted growth values.

**Russell 2000® Growth Index** reflects the performance of U.S. small-cap equities with higher price-to-book ratios and higher forecasted growth values.

Index performance does not reflect the expenses of managing a portfolio as an index is unmanaged and not available for direct investment.
