Fees & charges (%)

Annual management charge (AMC)	0.75
Ongoing charge (OCF)	1.52

All ongoing charges stated are as per latest published report and accounts.

The ongoing charges includes fees payable to Distributors. Where the ongoing charges exceed the target outperformance relative to the benchmark the return is likely to be below the benchmark return, even when the Fund's outperformance target (before the deduction of charges) has been achieved.

Fund charges will impact the value of your investment. In particular, the ongoing charges applicable to each fund will dilute investment performance, particularly over time. For further explanation of charges please visit our Fund Charges page at www.janushenderson.com.

Under some circumstances initial charges may apply. Please refer to the Prospectus for more details.

Additional fund information

Tax assumptions and reliefs depend upon an investor's particular circumstances and may be subject to change. Please note the performance target is to be achieved over a specific annualised time period. Refer to the performance target wording within the objective. The performance data does not take account of the initial charge and Janus Henderson does not currently levy a redemption charge. 100% of the Annual Management Charge is taken from capital. Please note: due to rounding the figures in the holdings breakdowns may not add up to 100%. This is a Luxembourg SICAV Fund, regulated by the Commission de Surveillance du Secteur Financier (CSSF). Note that any differences among portfolio securities currencies, share class currencies and costs to be paid or represented in currencies other than your home currency will expose you to currency risk. Costs and returns may increase or decrease as a result of currency and exchange rate fluctuations. To obtain our prospectus and any additional information please visit our website on: www.janushenderson.com. Investment into the fund will acquire units/shares of the fund itself and not the underlying assets owned by the fund. The ongoing charge is calculated using the PRIIP methodology. The PRIIP methodology differs to the UCITS ongoing charge methodology, as the PRIIP methodology captures additional recurring charges, including but not limited to: Interest paid on borrowing (e.g. bank interest); Any fees incurred in relation to stock-lending activity (i.e. the fee paid to the lending agent); Any costs associated with holding closed-ended vehicles. Cash balances and exposures are based on settled and unsettled trades as at the reporting date.

Investment policy

The Fund invests at least 80% of its assets in investment grade corporate bonds and other types of investment grade bonds, denominated in Euros. The Fund may invest up to 20% of its net assets in total return swaps, and may invest in contingent convertible bonds (CoCos); and/or asset-backed and mortgage-backed securities. The Fund may also invest in other assets including bonds of other types from any issuer (including perpetual bonds), cash and money market instruments. The Investment Manager may use derivatives (complex financial instruments), including total return swaps, with the aim of making investment gains in line with the Fund's objective, to reduce risk or to manage the Fund more efficiently. The Fund is actively managed with reference to the iBOXX Euro Corporates Index, which is broadly representative of the bonds in which it may invest, as this forms the basis of the Fund's performance target. The Investment Manager has discretion to choose investments for the Fund with weightings different to the index or not in the index, but at times the Fund may hold investments similar to the index.

Investment strategy

The Investment Manager seeks to provide a total return in excess of that generated by the benchmark over a market cycle by investing primarily in Euro denominated investment grade rated corporate bonds. The investment process combines asset allocation views with rigorous fundamentally driven security selection from the credit analysts.

Fund specific risks

When the Fund, or a share/unit class, seeks to mitigate exchange rate movements of a currency relative to the base currency (hedge), the hedging strategy itself may positively or negatively impact the value of the Fund due to differences in short-term interest rates between the currencies. The Fund could lose money if a counterparty with which the Fund trades becomes unwilling or unable to meet its obligations, or as a result of failure or delay in operational processes or the failure of a third party provider. CoCos can fall sharply in value if the financial strength of an issuer weakens and a predetermined trigger event causes the bonds to be converted into shares/units of the issuer or to be partly or wholly written off. An issuer of a bond (or money market instrument) may become unable or unwilling to pay interest or repay capital to the Fund. If this happens or the market perceives this may happen, the value of the bond will fall. When interest rates rise (or fall), the prices of different securities will be affected differently. In particular, bond values generally fall when interest rates rise (or are expected to rise). This risk is typically greater the longer the maturity of a bond investment. The Fund invests in high yield (non-investment grade) bonds and while these generally offer higher rates of interest than investment grade bonds, they are more speculative and more sensitive to adverse changes in market conditions. Some bonds (callable bonds) allow their issuers the right to repay capital early or to extend the maturity. Issuers may exercise these rights when favourable to them and as a result the value of the Fund may be impacted. If a Fund has a high exposure to a particular country or geographical region it carries a higher level of risk than a Fund which is more broadly diversified. The Fund may use derivatives to help achieve its investment objective. This can result in leverage (higher levels of debt), which can magnify an investment outcome. Gains or losses to the Fund may therefore be greater than the cost of the derivative. Derivatives also introduce other risks, in particular, that a derivative counterparty may not meet its contractual obligations. If the Fund holds assets in currencies other than the base currency of the Fund, or you invest in a share/unit class of a different currency to the Fund (unless hedged, i.e. mitigated by taking an offsetting position in a related security), the value of your investment may be impacted by changes in exchange rates. Securities within the Fund could become hard to value or to sell at a desired time and price, especially in extreme market conditions when asset prices may be falling, increasing the risk of investment losses. Some or all of the ongoing charges may be taken from capital, which may erode capital or reduce potential for capital growth.

Glossary

Asset-backed securities (ABS)
A financial security which is 'backed' with assets such as loans, credit card debts or leases. They give investors the opportunity to invest in a wide variety of income-generating assets.

Distribution Yield
The Distribution Yield reflects the amounts that may be expected to be distributed over the next 12 months as a percentage of the mid-market share price of the fund at the date shown.

Duration
How far a fixed income security or portfolio is sensitive to a change in interest rates, measured in terms of the weighted average of all the security/portfolio's remaining cash flows (both coupons and principal). It is expressed as a number of years. The larger the figure, the more sensitive it is to a movement in interest rates. 'Going short duration' refers to reducing the average duration of a portfolio. Alternatively, 'going long duration' refers to extending a portfolio's average duration.

Future
A contract between two parties to buy or sell a tradable asset, such as shares, bonds, commodities or currencies, at a specified future date at a price agreed today. A future is a form of derivative.

High yield bond
A bond which has a lower credit rating below an investment grade bond. It is sometimes known as a sub-investment grade bond. These bonds usually carry a higher risk of the issuer defaulting on their payments, so they are typically issued with a higher coupon to compensate for the additional risk.

Mortgage-backed security (MBS)
A security which is secured (or 'backed') by a collection of mortgages. Investors receive periodic payments derived from the underlying mortgages, similar to coupons. Similar to an asset-backed security.

Option
A derivative instrument where one party pays/receives the total return of the underlying asset or market index, in exchange for payments typically linked to LIBOR.

Swaps
A derivative contract between two parties where pre-determined cash flows of two financial instruments are exchanged. Swaps can help to hedge risk and minimise uncertainty; for example currency swaps can be used to minimise foreign currency exposure.

Tracking error
This measures how far a portfolio's actual performance differs from its benchmark index. The lower the number, the more closely it resembles the index.

Underlying Yield
The Underlying Yield reflects the annualised income net of expenses of the fund (calculated in accordance with relevant accounting standards) as a percentage of the mid-market share price of the fund at the date shown.

Weighted Average Life (WAL)
The average time taken (in years) for the principal to be repaid for securitised assets, or the probable time to maturity for non-securitised assets. Securitised assets, also known as 'asset backed' securities, represent a pool of other interest bearing assets such as loans and mortgages. The value is based on the cash flows of the underlying assets.

Yield to worst
If a bond has special features, such as a call (ie, the issuer can call the bond back at a date specified in advance), the yield to worst is the lowest yield the bond can achieve provided the issuer does not default.
